

Choose one answer for each question.

☐ A. Cell

 B. Virion

- C. Capsule

○ D. Ribosome

☐ A. Cell

☒ B. Virion

☐ C. Capsule

☐ D. Ribosome

☐ A. Larger than prokaryotic cells

☒ B. Smaller than prokaryotic cells

☐ C. The same size as animal cells

☐ D. Made of many tissues

☐ A. Genetic material

☒ B. Cellular structures such as ribosomes and cytoplasm

☐ C. A capsid

☐ D. Any molecules

☐ A. A mineral crystal

☒ B. A host cell

☐ C. Sunlight alone

☐ D. Another capsid

☐ A. Both DNA and RNA in every case

☐ B. DNA or RNA

☒ C. Only proteins

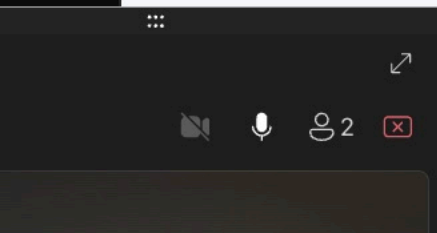

☐ D. Only phospholipids

☒ A. Envelope

☐ B. Capsid

☐ C. Cell wall

☐ D. Cytoplasm

☐ A. Organelle

☐ B. Envelope

☐ C. Nucleus

☒ D. Flagellum

☒ A. Cell membrane

☐ B. DNA

☐ C. Cell wall only

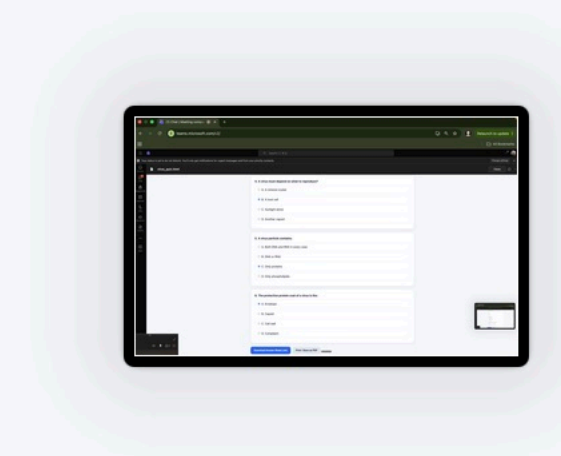

☐ D. Ribosome

☐ A. Make ATP independently

☒ B. Help protect the virus from the host immune system

☐ C. Perform photosynthesis

☐ D. Replace the viral genome

☒ A. Bind to host cells

☐ B. Make its own proteins

☐ C. Become a bacterium

☐ D. Eliminate its capsid

☐ A. Capsid shape

☐ B. Presence or absence of an envelope

☐ C. Type of nucleic acid

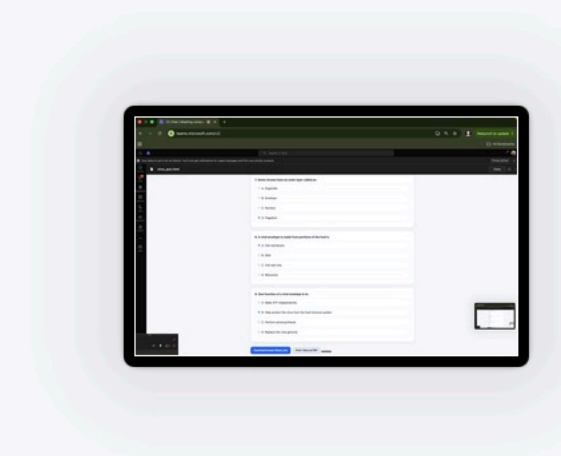

☒ D. All of the above

☐ A. Adenovirus

☐ B. Herpes viruses

☒ C. Orthomyxo viruses

☐ D. Coronaviruses

☐ A. Adenovirus

☐ B. Herpes viruses

☐ C. Orthomyxo viruses

☒ D. Coronaviruses

☐ A. They all consist of cells

☒ B. They can evolve

☐ C. They reproduce independently

☐ D. They have organelles

☐ A. They have no structure

☒ B. They lack cells and independent reproduction but possess genetic material and evolve

☐ C. They are all harmless

☐ D. They are made only of water
